Subject: Microsoft Settlement

I think the proposed settlement is a bad idea. Under the proposed settlement Microsoft will surely continue their anti-competitive practices and ultimately hurt not only consumers, but the future in computing as well. With computers increasingly being integral to society this proposed settlement will ultimately hurt all of society for years to come in many ways. If you go ahead with this settlement and concede to the political reasons for it, this will definately be a dark spot in history. Please do not go ahead with it if you care at all about the ramifications of it, stay strong and fight for the people.
